

Round 1 — Take-Home Task

Thanks for taking the time to work on this. Here's what we'd like you to build.

The idea

Build a small, self-contained web creative — something you'd expect to see as an ad or a fun little webpage — whose look changes with the real time of day.

Picture a scene that clearly feels different at night than it does in the middle of the day, and moves gently between the two, the way daylight actually changes outside your window. It could be a sky, a room, a character, a place — anything you like. The theme is entirely your choice.

What it must do

1. **It should always know what time it really is**, using the visitor's own device, and show the right look for that moment — nobody should have to press, tap, or move anything to make it correct.
2. **The change from one time of day to another should feel gentle and continuous** — the way daylight actually looks outside a window over the course of a real day — not like flipping between a few fixed pictures.
3. **Add one extra moment of your own, that only shows up during a short stretch of time you decide on**. Pick something that feels like it belongs there, not just decoration.
4. **It should look right the moment someone opens it, at any time** — first thing in the morning, the middle of the night, whenever. There's no warm-up — it should be correct straight away.
5. **It should look good on both a phone and a laptop screen**.

What to build it with

Plain HTML, CSS, and JavaScript only. No frameworks, no libraries, no build tools — we should be able to open your file straight in a browser.

What you don't need

- No images or other files are required — build the visuals with code.
- No backend, no database, no login.

If something is unclear

Make a sensible call and keep going — note down what you assumed and why.

What to send back

1. Your code, zipped, sent over email.
2. A short note (one page is plenty):
 - How you approached it
 - How you made sure it's always correct, however someone opens it
 - Anything you assumed
 - What you'd improve with more time

Time

Roughly 3–5 focused hours. Please send it back within 72 hours of receiving this. A clean, well-thought-out attempt beats a rushed one that took longer.
